Progress Report 8

for that week we added rating for items, next we want to add commenting item

Aman and Meiirzhan: they did case for rate, now we can rate item from 1 to 5, also sets the rating field of the corresponding TodoItem struct to the user input, and prints "Rating added!" message.

Yermurat and Imangali: they addded strconv.Atoi function for validation to ensure that the task number is valid and within the range of todoList slice's indices and that the rating is between 1 and 5.
